DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Election/Restrictions

2. Claims 289-295 and 313-347 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on October 26, 2006.
3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Specification

4. The abstract of the disclosure is objected to because it should be in a separate page. The abstract provided is the abstract of the corresponding international application. This abstract does not conform to US practice. Correction is required. See MPEP § 608.01(b).

Drawings

5. The drawings are objected to because all rectangular boxes such as 24 (Fig.8a-b) and 23 (Fig.8a) should be labeled. See 37 CFR 1.83. Corrected drawing sheets in

Art Unit: 2859

compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 286-288 and 296-312 are rejected under 35 U.S.C. 102(b) as being anticipated by Misic et al. P.N. 4,740,751 (Misic).

Misic discloses a method and corresponding apparatus for its practice for MRI.

Applicant's attention is directed to Fig.1 and corresponding description. The apparatus includes:

- (a) a device for providing a static magnetic field 10;
- (b) a processing unit (see central MRI computer); and
- (c) a radiofrequency (RF) resonator 32 coupled to an RF transmitter 30, said RF resonator comprising:

at least two conductive elements (42 and 44), each having a first curvature along a direction perpendicular to a longitudinal axis, said at least two conductive elements being spaced along said longitudinal axis "z", so that when an RF current flows within said at least two conductive elements in a direction of said longitudinal axis, a substantially homogenous RF magnetic field, directed perpendicular to said longitudinal axis, is produced in a volume defined between said at least two conductive elements; and

an electronic circuitry (see 60, 62 and 72) designed and configured for providing predetermined resonance characteristics of said RF resonator, for matching an impedance of said RF resonator to an impedance of said RF transmitter 30, and for balancing said RF magnetic field to have a substantially symmetrical profile with respect to a transverse axis being perpendicular to said longitudinal axis.

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Domalski, Duerr et al., and Hayakawa et al., all disclose resonators for MRI. Note the abstract and drawings of each of these documents.
